A Terragni Case Study

Driving App Adoption in Life Insurance

Note

The following extract is from a larger consulting project.
The app was one part of the project.

A project for only the app would involve a shorter methodology as follows:

A probe of the communication artefacts, a small insight exercise into the current adopters of the app to understand the context, adoption and continued usability insights: perceived usefulness, perceived ease of use and attitude towards app and brand. The STEPPS* framework for virality will be used.

*Jonah Berger, 2013.

Business Outcomes

Customer engagement, retention and growth

Majority of the customers do not see the relevance of an insurance app, unclear on what the benefits are and therefore averse to downloading the app

More than 63% of customers are not aware or not comfortable with digital payment gateways for insurance related transactions

Lack of information about insurance as a product category & financial instrument

Barriers

Framework

Solutions

Business Outcomes

Customers have the perception that life insurance is relevant only during premium payments

Lack of goal-relevance and self-relevance with a life insurance app

Lack of motivation to explore the app due product category

Primed by cross-functional expectations that the insurance app will not be useful as compared to a banking, shopping or other frequently used apps

Behaviour Science Led Communication

Me is a ready-to-go behaviour science-based platform. The art of communication infused with the magic of behaviour science. Understand behaviours to strike the right chord, shift behaviours and deliver impact.

Solutioning Framework:

Relevant and timely nudges in the communication about the app to drive customer behaviour shifts (EAST* framework for behaviour shifts)

EASY: Make it hassle-free, intuitive and low effort

ATTRACTIVE: Attract attention, incentivize, reward

SOCIAL: Show that most people perform the desired behaviour. Use the power of social communities

TIMELY: Demonstrate immediate costs and benefits. Prompt when customers are most receptive to behaviour change

STEPPS* Framework

Social Currency: People share things that make them look good or exclusive.

Triggers: External cues prompt people to talk about certain topics.

Emotion: Strong emotions, positive or negative, make content more shareable.

Public: Observable behaviors encourage others to imitate.

Practical Value: Useful information gets shared to help others.

Stories: Relatable narratives stick and are easily shared.

Business Outcomes

Self-Relevance & Goal-Relevance to drive registration and usage of the app:

Creating messaging with emphasis on Safety, Convenience, Value Addition and Educational Content

Removing Perceived Friction about insurance app surrounding safety and benefits:

Awareness campaigns around individual benefits of the app for e.g updating personal details with emphasis on safety

App recommendation through branch and website touchpoints

Client Background
