EAS®

Friction

Customers hate effort. The human brain is designed to feel effort and the resultant friction as pain.

You cannot eliminate what you cannot measure. Measure and eliminate friction with the Effort Assessment Score.

Create happier customers.

What is Friction?

The effort customers experience when interacting with your brand.

It is the painful barrier that keeps humans from achieving their desired outcomes.

What is EAS?

EAS is a first of its kind tool that integrates traditional research methods and neuroscience to measure customer effort.

EAS measures 4 types of Effort:

Physical:
When achieving a desired outcome requires customers to take physicaleffort.

Time:
When a customer must go through long waiting periods to achieve an outcome.

Cognitive:
When processes and touchpoints increase the cognitive load of customers.

Perceived:
When customers perceive the amount of friction involved in an outcome to be higher than what it may turn out to be.

How it works

Declarative assessment

Measures transactional Customer Effort for the following dimensions: Time, Physical, Cognitive & Perceived.

+

Non-declarative assessment

Focused on eliciting emotional associations and emotional components of effort for two dimensions: Emotional and Cognitive.

The Score

The Score integrates implicit testing responses and qualitative declarative answers. It provides a break up of effort across the three components of Time, Physical and Cognitive Effort. It also provides the associated emotions.
