Terragni SENSEMAKING

While traditional research focuses on stated preferences and subjective choices, our Sensemaking approach integrates Consumer Neuroscience, Behavioural Science, Traditional & Secondary Research, and Domain Knowledge, to uncover deep, context-specific, non-conscious drivers of behaviours and decisions.

This enables brands to optimize brand and product positioning, and drive accurate testing, stronger adoption, and sustained loyalty and wallet share—leading to superior business outcomes.

Terragni SENSEMAKING

Neuro-embedded-Quant

Traditional research relies on what humans explicitly express; Sensemaking delves into what humans implicitly feel.

How?

- **Uncovers Hidden Associations** – Products and their usage evoke context specific associations. These determine customer decisions and subsequent repurchase and loyalty.

- **Sharper Brand Positioning** – Implicit tests reveal the “gut-level” associations people have with your brand; associations that often shape perceptions before logic and rationalization kicks in. This reveals positioning opportunities that traditional research may miss out on.

- **In-depth, Actionable Insights** – most research captures what people *think they think*. IAT captures what they *actually feel and are unaware of*. It bridges the gap between stated intent and real-world behaviour.

- Robust Pr**edictions** – The IAT captures fast automatic responses- bypassing post rationalization and social desirability bias. This leads to more accurate behaviour prediction, requiring leaner sample sizes.

Terragni SENSEMAKING

Neuro-Based Non-Conscious Implicit Insights

Traditional research captures stated opinions, preferences, and rational thoughts. Buying decisions aren't just rational—they're deeply emotional and non-conscious.
Terragni Sensemaking uses a scalable, neuroscience-based technique known as **Implicit Association Test.**
